

Appl. No. 10/050,520  
Amdt. dated April. 27, 2005  
Reply to Office Action of April. 7, 2005

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

Claims 1-58 (canceled)

59. (currently amended): In a reminder device for use with a cylindrical container, the device comprising:

- [[a.]] ~~a cylindrical container having an exterior side surface;~~
- [[b]] a. a deformable sheet continuous loop movable member, said sheet including a first edge, a second edge opposite thereto, and two free ends joining said first and second edges, and said ends defining a length between said ends portion, and said sheet including a second portion linking to said first portion to form a loop;
- [[c.]] ~~said sheet deforming across said length to link a first portion of said sheet to a second portion of said sheet to form said continuous loop;~~
- [[d]] b. said loop movable member defining a first structural area for supportive engagement and said loop movable member defining a second structural area for selective anti-displacement engagement;
- [[e]] c. said loop movable member held on the side of said ~~the~~ container and said loop movable member engageably moveable within a plane to each of a plurality of selectable reminding positions;
- [[f]] d. a deformable support sheet member, said support member defining a first structural area to receive supportive engagement therewith said first area of said loop movable member, and said support member defining a second structural area to receive selective anti-displacement engagement therewith said second area of said loop movable member at one of said selectable positions;
- [[g]] e. said selective anti-displacement engagement of said second area of said loop movable member with said second area of said support member at one of said selectable positions disallowing said loop movable member to move along a path within said plane, said path representing the shortest distance within said plane, between said one selected position and a second one of said selectable positions.

Appl. No. 10/050,520  
Amdt. dated April. 27, 2005  
Reply to Office Action of April. 7, 2005

60. (currently amended): A device as in claim 59 wherein the format of said loop movable member is included in a first portion and said support member is included in a second portion of a common deformable sheet is one chosen from a list including, included in a first portion of a deformable common sheet which includes said support member in a second portion, included in a sheet and is adapted for subsequent assembly, assembled with said support member, assembled with the container.
61. (currently amended): A device as in claim 59 wherein said support member is a prescription pharmacy label.
62. (previously presented): A device as in claim 59 wherein one of said anti-displacement engagement areas includes an element which is one chosen from a list which includes, a détente, an anti-rotation détente, an aperture, a tooth, a label sheet, a deformable member, an adherable member, a notch, an adhesive member, a tab, an opening, a bump, a recess, a protrusion, a slit, a ridge, a deformation.
63. (previously presented): A device as in claim 59 and further including co-operating indicia.
64. (previously presented): A device as in claim 63 wherein said co-operating indicia include an arrangement of times co-operating with a pointer adapted to point to any one of said times.
65. (previously presented): A device as in claim 59 and further including an adhesive.
66. (currently amended): A device as in claim 59 wherein said container is a pharmacy container and further including a container.
67. (canceled): A device as in claim 59 and further including a pharmacy label.
68. (canceled): A device as in claim 59 wherein said loop member can slide to select said position.
69. (currently amended): A device as in claim 59 wherein said loop member can rotate to select said position movement performed by said movable member to select one of said positions is one of a type chosen from a list which includes, sliding movement, rotational movement.
70. (currently amended): A device as in claim 63 wherein said indicia can further be customized 59 where said preassembled device remains preassembled during said engaged movement of said moveable member from said one selected position to said second one of said selectable positions.

Appl. No. 10/050,520  
Amdt. dated April. 27, 2005

71. ((currently amended): A device as in claim 59 and further including a plurality of non-identical selectable values viewable at a viewing surface of said support member, said unselected plurality immediately prior to selection, exhibiting a characteristic which is one chosen from a list including, simultaneously uncovered, simultaneously viewable, arranged in an array, showing at least one of said values designated for an event.
72. (currently amended): ): ~~In a reminder device, the device comprising~~ A method comprising:
- [[a.]] ~~a cylindrical container having an exterior side surface;~~
- [[b]] a. providing a deformable sheet continuous-loop movable member, said-loop the movable member defining a first structural area for supportive engagement and said-loop the movable member defining a second structural area for selective anti-displacement engagement, the material forming said second structural area including a deformable sheet material sheet including a first portion, and the sheet including a second portion for linking to the first portion to form a loop;
- [[c]] b. said-loop the movable member held retainable on the side of said-container a cylindrical container and said-loop the movable member engageably moveable within a plane to each of a plurality of selectable reminding positions;
- [[d]] c. providing a deformable support sheet member, said the support member defining a first structural area to receive supportive engagement therewith said the first area of said-loop the movable member, and said the support member defining a second structural area to receive selective anti-displacement engagement therewith said the second area of said-loop the movable member at one of said the selectable positions;
- [[e]] d. said such that the selective anti-displacement engagement of said the second area of said-loop the movable member with said the second area of said the support member at one of said the selectable positions disallowing said-loop disallows the movable member to move along a path within said the plane, said the path representing the shortest distance within said the plane, between said the one selected reminding position and a second one of said the selectable reminding positions.
73. (currently amended): A device method as in claim 72 wherein ~~said-loop the movable member~~ is included in a first portion and ~~said the support member~~ is included in a second portion of a common deformable sheet.

Appl. No. 10/050,520  
Amdt. dated April. 27, 2005  
Reply to Office Action of April. 7, 2005

74. (currently amended): A device method as in claim 72 wherein said the support member is a prescription pharmacy label.
75. (currently amended): A device method as in claim 72 wherein one of the anti-displacement engagement areas includes an element which is one chosen from a list which includes, a détente, an anti-rotation détente, an aperture, a tooth, a label sheet, a deformable member, an adherable member, a notch, an adhesive member, a tab, an opening, a bump, a recess, a protrusion, a slit, a ridge, a deformation.
76. (currently amended): A device method as in claim 72 wherein ~~said loop member can slide to select said position~~ the type of movement performed by the movable member to select one of the reminding positions is one chosen from a list which includes, sliding movement, rotational movement
77. (currently amended): A device method as in claim 72 and further including co-operating indicia including an arrangement of values co-operating with a pointer adapted to point to any one of said values.
78. (canceled): A ~~device as in claim 77 wherein said co-operating indicia include an arrangement of times co-operating with a pointer adapted to point to any one of said times~~.
79. (currently amended): A device method as in claim 72 ~~wherein said loop member can rotate to select said position and further providing the cylindrical container~~.
80. (currently amended): A device method as in claim 72 and further including an adhesive.
81. (currently amended): A device method as in claim 72 ~~wherein said container is a pharmacy container~~ where said preassembled device remains preassembled during the engaged movement of the moveable member from the one selected reminding position to the second one of the selectable reminding positions.
82. (currently amended): A device method as in claim 72 and further including a plurality of non-identical selectable values viewable at a viewing surface of said support member, said unselected plurality immediately prior to selection, exhibiting a characteristic which is one chosen from a list including, simultaneously uncovered, simultaneously viewable, arranged in an array, showing at least one of said values designated for an event.
83. (canceled): A ~~device as in claim 72 and further including a pharmacy label~~.

Appl. No. 10/050,520  
Amdt. dated April. 27, 2005

- 84. (new):** A reminder device which can be attached to the side of a cylindrical container, comprising:
- a. a deformable sheet movable member, the sheet including a first portion, and the sheet including a second portion for linking to the first portion to form a loop;
  - b. the movable member defining a first structural area for supportive engagement and the movable member defining a second structural area for selective anti-displacement engagement;
  - c. such that, when the movable member is formed into a loop by linking the second portion to the first portion and the loop is held on the side of the cylindrical container, the movable member is engageably moveable within a plane to each of a plurality of selectable reminding positions;
  - d. a deformable support sheet member, the support member defining a first structural area to receive supportive engagement therewith the first area of the movable member, and the support member defining a second structural area to receive selective anti-displacement engagement therewith the second area of the movable member at one of the selectable reminding positions;
  - e. whereby, the selective anti-displacement engagement of the second area of the movable member with the second area of the support member at one of the selectable reminding positions disallows the movable member to move along a path within the plane, the path representing the shortest distance within the plane, between the one selected reminding position and a second one of the selectable reminding positions.
- 85. (new):** A device as in claim 84 and further including a container.
- 86. (new):** A device as in claim 84 and further including an adhesive.
- 87. (new):** A device as in claim 84 where said preassembled device remains preassembled during the engaged movement of the moveable member from the one selected reminding position to the second one of the selectable reminding positions.
